

Close-Minded

Not receptive to other ideas; only their own
Rigid thinking and a refusal to consider other
beliefs
Insensitive towards others' feelings

Open-Minded

Open to new ideas and experiences
Passionate about their own beliefs but considerate
of others
Empathetic towards others' feelings

Having convictions can be great, but strong belief does not negate an open mind. Being open-minded means having the ability to consider other perspectives and trying to be [empathetic](#) to other people, even when you disagree with them.

Your Result: Anxious/Ambivalent Attachment

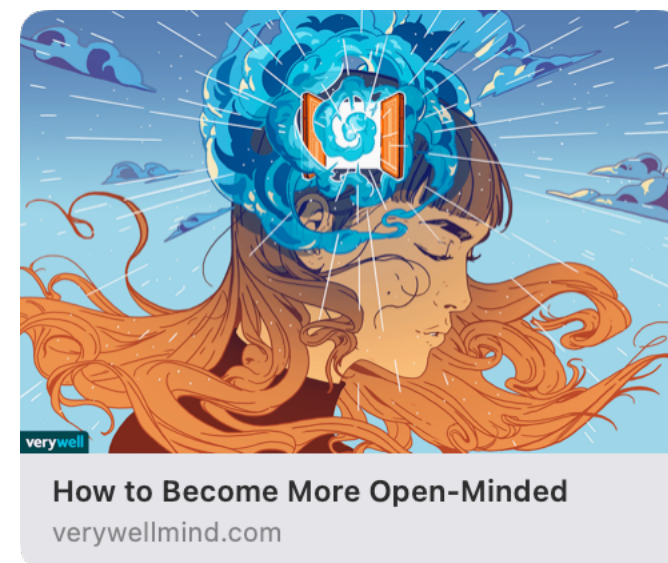

Not all of us get our needs met by our parents during those early years. If you fall into that category, you're not alone. One [study](#) of 14,000 U.S. children born in 2001 found that about 40% did not form secure attachments and lacked strong emotional bonds with their parents.

You may be wary of getting close to others, and fear that you will lose those close to you. That said, your attachment style doesn't have to define your relationships. You can learn tools to form healthier attachments in adulthood, even if you didn't have an ideal relationship with caregivers during childhood.

If you're concerned about your results, it might help to learn more about how attachment styles can impact you:
